

Example #1:

<Insert Group Member Names Here>

| | | | | | | |
|----------|----------|----------|----------|----------|--------|--------|
| 802449 | 824246 | 834597 | 844390 | 846723 | 846986 | 847781 |
| 848750 | 428238 | 432727 | 433417 | 444372 | 446205 | 452009 |
| 00426332 | 00429510 | 00432727 | 00444372 | 00453708 | | |

1) Group Member Names

2) We have one book checked out from you, "Real-Time Profit Management"

3) 1.R00848750

2.R00415085

3.R00483168

4.R00299109

4) We felt that number one was the best choice because it gave a more detailed, yet precise, clear answer. Number two and three were saying the same thing and number four just wasn't as strong as the other three.

Hello Professor Buchheit,

Our group consists of 5 people: <list>. We only have **one** book floating around in our group.

For the weekend assignment, all five group members responded. We have ranked the "stand out" exams as follows:

1) R01949131

2) R00480034

3) R00484409

4) R00821129

5) R00846986

6) R00750034

7) R00472535

8) R00483168

7) R00847781

8) R00576032

9) R00644852

10) R00462226

11) R00468993

12) R00742941

13) R00480050

We collectively came up with reasons for why we selected our **top two** exams. Our number one ranking is well articulated, and it shows understanding of what happened during the auction and why it happened. Our number two ranking is similar to number one in how well the questions are answered and explained; however, we feel the delivery isn't as good as number one.

If you have any questions, please let me know.

Thanks,
